

# Arthaland Corporation

- Headquarters – Philippines
- EP100 commitment – Net Zero Carbon Buildings
- Joining year – 2020
- Target year – 2030

Arthaland is a leading sustainable developer in the Philippines with a variety of certified sustainable projects, recognised by international building standards.

The global energy crisis is impacting energy availability in the Philippines and energy efficiency measures, alongside renewables, have shown their importance in terms of reducing operational costs and helping to create a more energy-resilient community and energy network.

Arthaland has reduced its greenhouse gas emissions by 59% since joining EP100 and the Net Zero Carbon Buildings Commitment two years ago. It is working to put energy efficiency at the heart of its net zero strategy, recognising the important role it can play for investors, customers, and tenants.

Let's turn our decarbonisation pledge into scalable action. Two years since our pledge, we are more than halfway through decarbonising our existing development portfolio and have proven that building sustainable developments is possible. In fact, we are expanding our footprint from high-end development to socialised housing projects, where the benefits of a green home matter most.
