

Mabe

- Headquarters – Mexico
- EP100 commitment – Implement an Energy Management System
- Joining year – 2020
- Target year – 2030

Mabe is a manufacturing company with over 75 years of experience in the home appliance sector. It designs, produces, and distributes appliances in more than 70 countries around the world and employs more than 24,000 people globally.

In 2020, Mabe committed to implementing an ISO 50001 certified energy management system across all operations and to increase energy productivity by 30% by 2030 (from a 2018 baseline).

The company's corporate sustainability model identified implementing an energy management system as a key action and strategic approach to reduce Mabe's greenhouse gas emissions.

Mabe has a systemic and standardised process for identifying, monitoring, and optimising energy use across its operations and in the manufacturing of its products.

As part of its strategic vision, Mabe seeks to promote energy management systems as a key step to decarbonisation.

Implementing an Energy Management System is part of our long-term vision to generate solutions that advance product and operational efficiency throughout the company.
